

MEETING THE PROJECT MANAGEMENT CHALLENGE

2004

Abstract

“Managing in Turbulent Times”

Federal Enterprise Transformation Using an Enterprise Architecture

Dr. Fred Messing

The definition of the success of a Federal agency has changed with the enforcement of the President's Management Agenda (PMA) and the OMB standards. Federal agencies are being required to transition to a more business-like enterprise model focused directly on their customers and their requirements for high-value services. Agency budgets are required to map directly to the mission outputs required from the agency, and to the PMA and OMB standards. The agencies are being required to transform their organizations to be more customer-centric with clear metrics for success. The foundation for a successful transformation is developing a comprehensive enterprise architecture and establishing effective program management to implement the transformation to that architecture.
